

Project Development Phase
Sprint II

Date	13 November 2022
Team ID	PNT2022TMID41867
Project Name	Signs with Smart Connectivity for better road safety

SPRINT TARGETS:

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-2	Safe Ride	USN-4	As a traveler , I shouldhave a hustie free journey	20	Medium	Saranya Sandhiya Sakthikala Santhiya Kariyaraman

Wokwi Simulation: <https://wokwi.com/projects/348178332935782994>

The screenshot displays the Wokwi web-based IDE. The left pane shows the 'sketch.ino' file with the following code:

```
1 #include <WiFi.h> //library for wifi
2 #include <PubSubClient.h> //library for mqtt
3 #include "DHT.h" // library for dht11
4 #define DHTPIN 5 // what pin we're connected to
5 #define DHTTYPE DHT22 // define type of sensor DHT 11
6
7 DHT dht (DHTPIN, DHTTYPE); // creating the instance by passing pin and type of dht connect
8
9 void callback(char* topic, byte* payload, unsigned int payloadLength);
10
11 //-----credentials of IOT Accounts-----
12
13 #define ORG "psh4py" //IOT ORGANIZATION ID
14 #define DEVICE_TYPE "alert-device" //device type mentioned in the Watson IoT Platform
15 #define DEVICE_ID "4571" //Device ID mentioned in the Watson IoT Platform
16 #define TOKEN "12345678" //Token
17 String data1;
18 float h, t;
19
20
21 //----- Customise the above values -----
22 char server[] = ORG ".messaging.internetofthings.ibmcloud.com"; // Server Name
23 char publishTopic[] = "int-2/evt/data/fmt/json"; // topic name and type of event perform a
24 char subscribTopic[] = "int-2/cmd/command/fmt/string"; // cmd REPRESENT command type AND
25 char authMethod[] = "use-token-auth"; // authentication method
26 char token[] = TOKEN;
27 char clientId[] = "d:" ORG ":" DEVICE_TYPE ":" DEVICE_ID; //client id
28
29
30 //-----
31 WiFiClient wificlient; // creating the instance for wificlient
32 PubSubClient client(server, 1883, callback, wificlient); //calling the predefined client
33
34
```

The right pane shows the 'Simulation' window with a visual representation of the Arduino board and its connections. Below the simulation, the console output displays the following data:

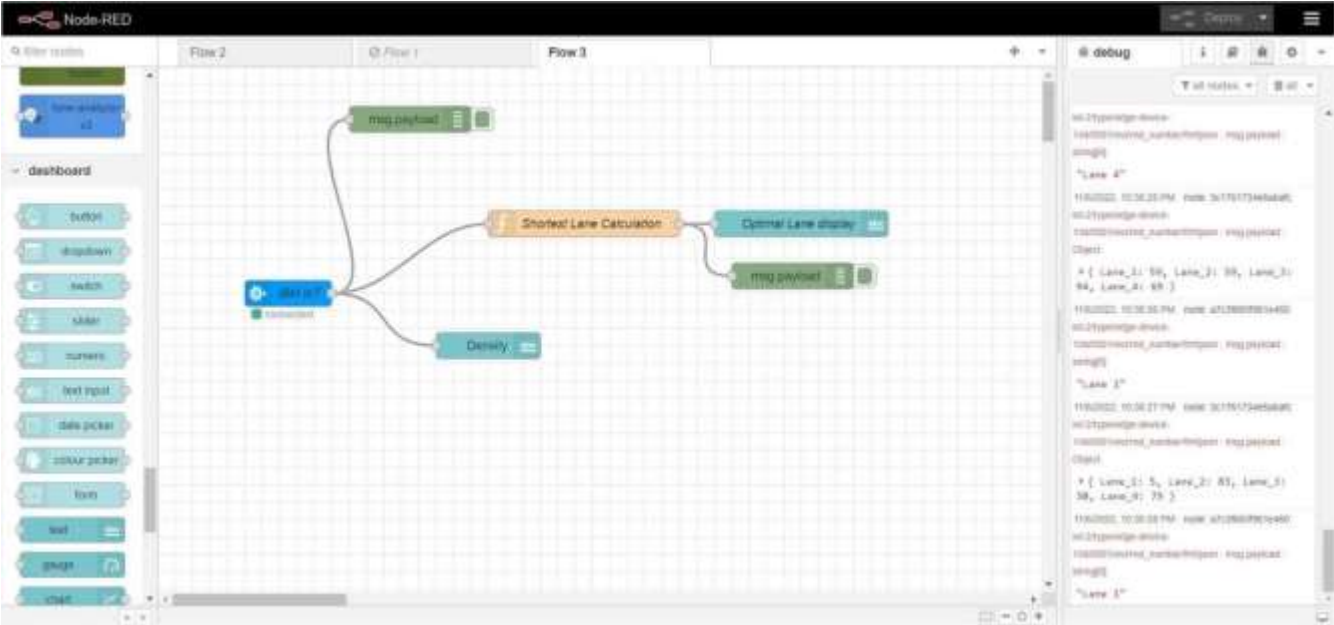

```
Temp:37.48
humidity:86.00
Sending payload:
{"temp":37.48,"humidity":86.00,"North":0,"South":0,"East":0,"West":0}
Publish ok
Reconnecting client to psh4py.messaging.internetofthings.ibmcloud.com
.....
```

The screenshot shows the EdgeX Foundry web interface. At the top, there's a navigation bar with 'Browse', 'Action', 'Device Types', and 'Interfaces'. On the right, there's a button 'Add Device'. Below this is a header for the device '0001', showing its status as 'Disconnected', device type as 'edge-device-1', class as 'Device', and a timestamp 'Nov 9, 2022 8:56 PM'. The main section is titled 'Recent Events' and contains a message: 'The recent events listed show the live stream of data that is coming and going from this device.' Below this is a table of recent events.

Event	Value	Format	Last Received
mlc_number	{"Lane_3":5,"Lane_2":83,"Lane_3":30,"Lane_4":...	json	a few seconds ago
mlc_number	{"Lane_3":59,"Lane_2":99,"Lane_3":94,"Lane_4":...	json	a few seconds ago
mlc_number	{"Lane_3":93,"Lane_2":88,"Lane_3":69,"Lane_4":...	json	a few seconds ago
mlc_number	{"Lane_3":2,"Lane_2":61,"Lane_3":21,"Lane_4":...	json	a few seconds ago
mlc_number	{"Lane_3":70,"Lane_2":11,"Lane_3":69,"Lane_4":...	json	a few seconds ago

At the bottom right, a status bar indicates '1 Simulation running'.
